

PROMYS for Teachers

Summer Immersion in Mathematics for Secondary Teachers

Earn free graduate credit and a stipend!

July 1 – August 9, 2019

on the campus of Boston University

Now in its 29th summer, PROMYS for Teachers is a six-week program that fosters new insights into the nature of mathematical investigation. Participants practice the habits of mind that are at the core of creative mathematics.

- Through problem solving, teachers develop many classical results in Number Theory.
- Academic year workshops help teachers translate the summer experience into fundamental change in their own classrooms.
- Teachers receive free graduate credit from Boston University and a \$1,200 stipend.

"The most valuable part of the experience was not learning any specific mathematical concept – rather, it was experiencing the struggle of grappling with higher-level problems, discovering mathematical patterns in collaboration with others, and learning how to incorporate discovery-based problems in my classes."

- Dr. Andrew Hollins, Mathematics Department Head, Natick High School (PROMYS for Teachers 2005)

APPLICATIONS to PROMYS for Teachers are available online at

www.promys.org/pft/applications

and will be accepted on a rolling basis through June 1, 2019.
